II. QUARTERLY MANAGEMENT REPORT

From the 1 January 2023, the new international financial reporting standard IFRS 17 is applied. Standard affects a different way of calculating key business indicators such as revenue, combined ratio, and net profit. The introduction of the standard is new for the entire insurance industry in the Republic of Croatia, consequently the calculation of the market size and market share according to the new standard is not available for now.

In the period observed, total income from insurance contracts amounted to EUR 289.8m and increased by 11.1 percent compared to the same period of the previous year. The total non-life insurance income amounted to EUR 285.1m and increased by 11.3 percent. Total life insurance income increased by 0.5 percent and amounted to EUR 4.6m.

Total expenditure from insurance contracts amounted to EUR 290.4m in the period observed and increased by 20.1 percent compared to the same period of the previous year. The total non-life insurance expenditure amounted to EUR 288.8m and increased by 21.8 percent. Total life insurance expenditure decreased by 65.4 percent and amounted to EUR 1.6m.

Total net result, i.e. net loss from insurance contracts, amounted to EUR 2.5m and the net result is 121 percent lower compared to the same period of the previous year. One of the reasons are weather disasters that affected Zagreb area and its surroundings, as well as central and eastern Croatia during July and August, and caused material damage to vehicles, property, crops and plantations in the amount of more than EUR 30m. During the first few days after the storms, number of claims reported exceeded total number of claims reported after the 2020 earthquake, including both earthquakes in Zagreb and Petrinja. Although the Company has adequate reinsurance protection and will compensate a significant part of the claims through concluded reinsurance contracts, claims have a negative impact on the Company's operations in the amount of about EUR 20m compared to last year.

Total assets of the Company as at 30 September 2023 amounted to EUR 1.5 billion, which represents an increase of 3.1 percent compared to 31 December 2022.

Liabilities from insurance contracts as at 30 September 2023 amounted to EUR 744.7m, representing an increase of 5.9 percent compared to 31 December 2022.

Considering the application of the new accounting standards (IFRS 17 and IFRS 9), the Company, in accordance with the requirements of IFRS 17, restated the comparative periods and recognized the one-time restitution of the initial balances in capital and reserves on 1 January 2022, while in accordance with IFRS 9, it used the possibility of selecting a simplified method based on which it is not necessary to change comparative data, but to recognize adjustments to the book value of financial assets in the initial retained earnings from the date of the first application of the standard, i.e. from 1 January 2023.

Due to the above, the reported net profit for Q3 2022 is not fully comparable with the profit reported in Q3 2023. Below are presented the comparable net profits of the Company, whereby the profit of the previous period was adjusted for the effects of IFRS 9 as if it had been applied in 2022 year.

Net profit of the Company (in millions of EUR):

I-IX 2022	IFRS 9 impact	I-IX 2022	I-IX 2023
reported		adjusted for IFRS 9 impact	reported
40.72	(1.77)	38.95	26.50

Unaudited unconsolidated financial statements for the third quarter of the 2023 will be available on the web sites of CROATIA osiguranje d.d., Zagreb Stock Exchange and Officially appointed mechanism for the central storage of regulated information.

Significant business events in the reporting period

Croatia osiguranje continues with the process of raising operational excellence and expanding the network of polyclinics at the national level

The digital business segment recorded new positive results in the first three quarters of 2023. Realized premium from total digital business increased by 25 percent compared to the same period last year, while the number of clients using the Moja Croatia mobile application increased by 29 percent. LAQO, Croatia's digital brand, achieved premium growth of 50 percent compared to the same period last year. Cumulative growth of the total digital business segment in the first nine months of the year is 41 percent.

CROATIA osiguranje d.d. investments in healthcare in the last three years amounts to around EUR 20m. In the first three quaters of 2023, Croatia Poliklinika recorded an increase in revenue from its core business by 58 percent compared to the same period in 2022. The ultimate goal is to provide top medical service and health protection to residents throughout Croatia. In the first half of the year, a new Croatia Polyclinic was opened in Osijek, the sixth in a row in Croatia, and by the end of the year, it is planned to open three more new Polyclinics in Zadar, Varaždin and Split.

In May CROATIA osiguranje d.d. launched Spektar, a unique package offer on the insurance market that enables savings and additional benefits for all household members by combining insurance policies within the household. The market recognized and quickly accepted this innovation, so in the five months after its launch, over 43,000 households joined Spektar. CROATIA osiguranje d.d. hereby confirms its position as a leader in innovations on the insurance market.

For the third year in a row, in cooperation with an independent market research agency, survey of mystery shopping at CROATIA osiguranje d.d. outlets was carried out. The total score of the sales network in this wave is the best so far and is 85 out of a maximum of 100 points, indicating a high degree of compliance with the highest sales standards in the sales network. The research was carried out on a sample of 12 Croatian branch offices, four agencies and one motor vehicle examination station. The best region is Slavonia South with a score of 96, and even three regions achieved an index of 90 or more.

CROATIA osiguranje d.d. continuously invests in the development of knowledge and talents through cooperation with higher education institutions. The fourth generation of participants was enrolled in the postgraduate specialist study "Products, digital innovations and technologies in insurance -

INSURTECH", which was launched by the Faculty of Electrical Engineering and Computing in Zagreb in cooperation with CROATIA osiguranje d.d. During the studies the participants become familiar with the latest trends in the information and communication development and digital technologies, as well as organizational and business aspects of their application in the dynamic business environment of the insurance industry.

CROATIA osiguranje d.d. and Faculty of Economics and Business, University of Zagreb signed an agreement on cooperation on the newly launched innovative educational module Economic Analytics. It is a four-semester module in which students of the 4th and 5th year of the integrated undergraduate and graduate university study of Business Economics will acquire a combination of knowledge and skills with the aim of increasing their own competitiveness on the labor market.

Decision on the election of the member of Supervisory Board

On 14 March 2023, the General Assembly of CROATIA osiguranje d.d. was held at which the Decision was made on the election of Vitomir Palinec as a member of the Supervisory Board for a period of 4 years, with the beginning of the mandate on 20 June 2023, subject to the approval of HANFA. At the session held on 31 March 2023, the Administrative Council of HANFA passed resolution authorizing Vitomir Palinec to perform the function of member of the Supervisory Board of CROATIA osiguranje d.d., for a term of 20 June 2023 to 20 June 2027.

The Russian-Ukrainian crisis

The ongoing war in Ukraine and the related sanctions targeted against the Russian Federation are affecting the world economy globally, primarily in the form of increase and uncertainty of the energy prices and the spill over of inflationary effects on individual economies. The Company has no direct operations in insurance and reinsurance business with Russia and Ukraine (nor with reinsurance companies, brokers, MGA agencies, etc.). In addition, reinsurance contracts through the Sanction & Embargo clause exempt reinsurance transactions with states under any sanctions and the terms of insurance on the direct side exclude war damage. The Company has an exposure to insurance policyholders who are members of certain companies associated with entities from Russia and does not expect a significant adverse effect on the ability to collect these receivables in the short term, ie. as a direct consequence of the war in Ukraine. In case of collection receivables inability, the Company disposes of receivables insurance instruments that can be activated as part of compulsory collection if necessary. Furthermore, the Company's certain investments, shareholdings in individual companies and investments in debt instruments are to a certain extent more exposed to their operations of EU issuers that have a slightly more exposed part of operations in Russia. These exposures are not material in terms of business threats and considering the size of the total investment portfolio. The aforementioned indirect exposures may have a negative impact on the Company's results in the event of escalation, which cannot be precisely quantified due to uncertainty and market volatility. However, based on the internal analysis of the impact of the Russian-Ukrainian crisis, as well as the sanctions imposed on Russia, the Company expects to maintain financial stability and a further high level of solvency (SCR ratio), which as of 30 June 2023 amounted to 319%. In addition, at the date of these

financial statements the Company continues to meet its obligations as they fall due and therefore continues to apply the going concern basis of preparation.

Significant events after the end of the reporting date

There were no significant events after the balance sheet date.

Company branch

As at 30 September 2023 the Company has one registered branch (Branch Ljubljana). In its legal transactions, the branch operates as CROATIA osiguranje d.d. branch Ljubljana, in the Croatian language, and as CROATIA ZAVAROVANJE d.d. branch Ljubljana, in the Slovenian language.

In accordance with the Company's decision, for the purpose of more efficient operations, the Company plans to close the Ljubljana branch on 31 March 2024. The Company will continue to operate in Slovenia with cross-border distribution of insurance based on the freedom to provide services in accordance with legal regulations, which means that CROATIA osiguranje d.d. continues to provide insurance services in registered types of insurance based on the freedom to provide services to all current and future corporate clients in Slovenia.

Purchase of treasury shares

The Company does not own treasury shares, and the General Assembly did not authorise the Company to acquire treasury shares.

Expected development in the future

The geopolitical situation in the world is still not calming down. The attack by Hamas on Israel has sharply increased tensions in a strategically sensitive and extremely important area in terms of resources and traffic. Depending on Israel's response to the attack, as well as the potential involvement of other regional and global players in the conflict, different scenarios and impacts on the world economy are possible.

Weather conditions associated with climate change are becoming more pronounced and extreme, which is manifested through unprecedented forest fires and floods during the summer, all over the world. This contributes to the expected tightening of reinsurance policy through changes in reinsurance conditions and price corrections.

Inflation in the EU is currently slowing down, but in the long term it will be slower than expected. The Government of the Republic of Croatia has announced that the minimum wages will be increased from 1 January 2024. Accordingly, there is further pressure on wage growth, and thus an increase in costs. In addition, starting in next year, regulatory changes will raise the costs of supplementary health

insurance, as well as health insurance as well as motor liability insurance. Insurers will hardly be able to amortize all the above-mentioned increases by themselves, so further price corrections can be expected accordingly.

Research and development activities

The Group continuously monitors environmental events and invests in market research, directs and supports the activities of affiliated companies that are in the function of organic growth and recognition of business opportunities and realization of new acquisitions.

Description of the most significant risks and uncertainties

In relation to the most significant risks and uncertainties which were described in the audited financial statements for the year 2022, in the period observed there were no significant changes in relation to the risks to which the Company is exposed in the course of its business, except as described in the chapter *Significant business events in the reporting period*.

Zagreb, 26 October 2023

Roberto Škopac	President
Dr.sc. Željko Lovrinčević	Vice President
Vitomir Palinec	Member
Hrvoje Patajac	Member
Dr. sc. Zoran Barac	Member
Pero Kovačić	Member
Hrvoje Šimović	Member

Members of the Management Board are:

Davor Tomašković	President
Robert Vučković	Member
Luka Babić	Member
Vančo Balen	Member

Basis for preparation of financial statements

Financial statements are prepared in accordance with the Capital Market Act (Official Gazette 65/18, 17/20, 83/21 and 151/22), International Accounting Standard 34 – *Interim Financial Reporting*, the Rules of Zagreb Stock Exchange and the Ordinance on the contents and structure of issuers interim reports and on the form and manner of their submission to the Croatian Financial Services Supervisory Agency, which is issued by the Croatian Financial Services Supervisory Agency.

Quarterly financial statements do not include all the information and disclosures required in the annual financial statements and should be read in conjunction with the Company's annual financial statements as at 31 December 2022. The annual financial statements have been prepared in accordance with International Financial Reporting Standards (IFRS) as adopted by the European Union. The Annual Financial Report for 2022, for the purpose of understanding the information published in the notes to the financial statements prepared for the third quarter of the 2023, is available on the company's official website, the official website of the Zagreb Stock Exchange and the Croatian Financial Services Supervisory Agency's Official Register. Changes in accounting policies from 1 January 2023 are listed in the section *Accounting policies*.

Financial statements are prepared by using the accrual principle, which is the underlying accounting assumption. Economic events are recognized when they occurred and are reported in financial statements for the period in which they occurred by using the underlying accounting principle of going concern.

Financial statements for the third quarter of the 2023 have not been audited.

Presentation currency

Company's financial statements are prepared in the euros as the functional and presentation currency. On 1 January 2023, the euro became the official monetary unit and legal tender in the Republic of Croatia. The fixed conversion rate is set at HRK 7.53450 for one euro. The introduction of the euro as the official currency in the Republic of Croatia represents a change in the functional currency that is calculated prospectively. Comparative periods and balances in the financial statements have been recalculated using the conversion rate.

Use of estimates and judgements

Preparation of financial statements in conformity with IFRS requires the Management Board to make judgements, estimates and assumptions that affect the application of accounting policies and reported amounts of assets, liabilities, income and expenses. The estimates and associated assumptions are based on historical experience and various other factors that are believed to be reasonable under the circumstances, and information available at the date of preparation of financial statements, the results of which form the basis of making the judgements about carrying value of assets and liabilities that are not readily apparent from other sources. Actual results may differ from these estimates. The estimates and underlying assumptions are reviewed on an ongoing basis. Changes of accounting estimates are recognised from the period in which an estimate is revised and in future periods, if the change also affects them.

Accounting policies

Accounting policies and measurement methods which are used in the preparation of financial statements for the reporting period are the same as those which are used for preparation of the audited financial statements for the year 2022 except for the changes listed below.

• IFRS 17 Insurance Contracts (effective for annual periods beginning on or after 1 January 2023)

IFRS 17 was issued in May 2017 as a replacement for IFRS 4 Insurance Contracts. Until reporting date, various supplements have been issued to IFRS 17 and IFRS 4 containing a number of clarifications for the purpose to facilitate the implementation of IFRS 17, to simplify certain requirements of the standard, and to extend the temporary exemption from IFRS 9 for annual periods starting on or after 1 January 2023. IFRS 17 establishes principles for the recognition, measurement, presentation and disclosure of insurance contracts, reinsurance contracts and investment contracts with discretionary participation characteristics.

i. Identification contracts in the scope of IFRS 17

An insurance contract is contract on the basis of which one party (issuer) assumes a significant insurance risk from the other party (the policyholder) and agrees to pay the policyholder compensation if the policyholder suffers damage due to an uncertain future event (insured event).

The Company is required to make a classification of all insurance contracts and conducts a test to determine whether the Company assumes a significant insurance risk from the policyholder when creating new price lists.

Certain insurance contracts issued by the Company in which the investor is entitled to and expected to receive, in addition to an amount not subject to the Company's discretion, potentially significant supplemental benefits based on the return of certain pools of investment assets, meet the criteria of a contract with a discretionary participation feature (DPF).

When identifying contracts in the scope of IFRS 17, in some cases the Company will have to assess whether a set or series of contracts should be treated as a single contract and whether embedded derivatives, investment components and goods and services components have to be separated and calculated according to a different standard. In the Company's life insurance contracts, there are no contracts that contain one or more components whose separation from the basic contract would be required under IFRS 17.

ii. Level of aggregation

Insurance contracts are aggregated into groups for measurement purposes and are determined firstly by identifying insurance portfolios, each comprising contracts subject to similar risks which are managed together. Contracts in different product lines are expected to be in different portfolios. Each portfolio is then divided into groups of contracts for which the recognition and measurement requirements under IFRS 17 apply. Upon initial recognition, The Company divides each portfolio into annual cohorts according to the beginning of the coverage year and each annual cohort is classified into one of the following groups:

- a group of contracts that are onerous upon initial recognition;
- a group of contracts for which, upon initial recognition, there is no significant possibility of becoming onerous subsequently;
- other groups of contracts, if they exist.

After the initial recognition, the classification of the contract in the insurance group is no longer changed. Reinsurance contracts are generally valued individually.

The level of aggregation requirements of IFRS 17 limit the offsetting of gains on groups of profitable contracts, through deferred recognition of contractual service margin ("CSM"), against losses on groups of onerous contracts, which are recognized immediately.

iii. Contract boundaries

The coverage period represents the contract boundary relevant when applying IFRS 17 requirements because the measurement of a group of contracts includes all of the future cash flows within the boundaries of each contract in that group.

Insurance contracts

Cash flows are within the contract boundary if they arise from substantive rights and obligations that exist during the reporting period in which the Company can compel the policyholder to pay premiums or in which the Company has a substantive obligation to provide the policyholder with the insurance contract services. A substantive obligation to provide services ends when:

- o the Company has the practical ability to reassess the risks of the particular policyholder and as a result, can set a price or level of benefits that fully reflects those reassessed risks; or
- o the Company has the practical ability to reassess the risks of the portfolio that contract contains, and consequently, can set a price or level of benefits that fully reflects the risks of that portfolio, and the pricing of the premiums up to the reassessment date does not take into account risks that relate to periods after the reassessment date.

Groups of issued insurance contracts are initially recognized upon the occurrence of the first of the following events at the beginning of the coverage period:

- coverage start date,
- when the Group determines that a group of insurance contracts becomes onerous.

There are no contracts within life insurance contracts portfolio whose changes would require new initial recognition under IFRS 17. Therefore, the only criteria for derecognition of an insurance contract is the expiration or fulfillment of the liability specified in the contract.

Reinsurance contracts

For reinsurance contracts, cash flows are within the contract boundary if they arise from substantive rights and obligations that exist during the reporting period in which the Company is compelled to pay amounts to the reinsurer or has a substantive right to receive services from the reinsurer. A substantive right to receive services from the reinsurer ends when the reinsurer:

- o has the practical ability to reassess the risks transferred to it and can set a price or level of benefits that fully reflects those reassessed risks; or
- o has a substantive right to terminate the coverage.

iv. Initial and subsequent measurement of insurance contracts

Measurement method depends on the insurance contract characteristics. Below are more detailed individual models.

• General measurement model – GMM and Variable fee approach – VFA

At initial recognition, the Company measures the contract group with a general model (General measurement model – GMM). The general model measures the group of insurance contracts at the level of:

(a) total cash flows from the performance of the contract, which include:

(i) estimates of future cash flows;

(ii) adjustments to reflect the time value of money and the financial risks associated with future cash flows where financial risks are not included in future cash flow estimates; and

(iii) adjustment of value for non-financial risk.

(b) the total margin for the service contracted (Contractual service margin - CSM).

The fulfillment cash flows from the group of contracts do not reflect the risk of non-performance of Company's obligations. Estimation of the value of future cash flows is measured as the present value of future gross expenditure (fees and expenses) reduced by the present value of future gross income (gross premium of future periods) taking into account the estimated probabilities of possible outcomes. All cash flows are discounted using risk-free interest rates adjusted to reflect the characteristics of the cash flows and, were applicable, the liquidity characteristics of the contracts.

The risk adjustment for non-financial risk for a group of contracts, determined separately from the other estimates, is the compensation required for uncertainty regarding the amount and timing of the cash flows arising from non-financial risk.

The CSM of a group of contracts represents the unearned profit that the Company will recognize as it provides services under those insurance contracts.

Upon initial recognition of a group of contracts, the group is not onerous if the total of the following is a net inflow:

(a) cashflows from the fulfillment of contract;

(b) any cash flows arising from related group of contracts at that date; and

(c) any amount arising from the derecognition of any assets or liabilities previously recognized for cash flows related to a group of contracts.

In the case of net outflows, the group of contracts constitutes onerous contracts and the net outflow is recognized as a loss in the profit and loss account. The Company determines the loss component of the liability for remaining coverage period for the onerous group by stating the losses displayed in accordance with the above mentioned. The loss component determines the amounts that are recognized in the profit and loss account as reversals of losses under onerous contracts and are, therefore, excluded from income from insurance contracts.

Subsequently, the carrying amount of statutory technical provisions of insurance contracts at each reporting date is the sum of the liability for remaining coverage and the liability for claims incurred. The liability for remaining coverage comprises the fulfilment cash flows that relate to services that will be provided under the contracts in future periods and any remaining CSM at that date or loss component at that date. The liability for claims incurred includes the fulfilment cash flows for claims incurred and expenses that have not yet been paid, including claims that have been incurred but not yet reported.

The fulfilment cash flows of groups of contracts are measured at the reporting date using current estimates of future cash flows, current discount rates and current estimates of the risk adjustment for non-financial risk. Changes in fulfilment cash flows are recognized as follows:

Changes related to future services	Adjusted against the CSM (or recognized in the insurance service result in profit or loss if the group is onerous)
Changes related to current or past services	Recognized in the insurance service result in profit or loss
Effects of time value of money, financial risk and changes on estimated future cash flows	Recognized as part of net financial income or expense from the insurance contract

The CSM is adjusted subsequently only for changes in fulfilment cash flows that relate to future services and other specified amounts and is recognized in profit or loss account as services are provided. The CSM at each reporting date represents the profit in the group of contracts that has not yet been recognized in profit or loss account because it relates to future service.

Regarding life insurance reinsurance contracts, the Company applies the same accounting policies as for the measurement of a group of insurance contracts.

Cash flows from acquisition costs arise from the activities of sales and underwriting of a group of contracts that are directly attributable to the portfolio of contracts to which the group belongs. For life insurance contracts, cash flows from insurance acquisition are allocated to groups of contracts using systematic and rational methods. The Company applies the above model for life insurance contracts and loan insurance contracts in the non-life insurance segment.

A variation of the general measurement model, called the "variable fee approach", is also envisaged, which shall be applied to certain life insurance contracts in which the owners of insurance policies participate in the change in the fair value of the specific items defined by the relevant insurance contracts. When applying that model, the insurer's share of fair value changes is included in the contractual service margin.

• Premium allocation approach – PAA

The Premium allocation approach (PAA) is a simplified measurement model in IFRS 17 that is available for insurance and reinsurance contracts that meet certain criteria.

The Company applies PAA to all contracts in the non-life insurance segment, except loan insurance to which the general measurement model as described in the life insurance section is applied, as the following criteria are expected to be met at initial recognition:

- Insurance contracts and disproportionate reinsurance contracts: the coverage of each contract in the group of contracts is one year or less.
- Reinsurance contracts containing related risks: the result of measuring assets for the remaining coverage does not differ significantly from the results obtained of the application of the general measurement model.

Upon initial recognition of each group of non-life insurance contracts, the carrying amount of the liability for remaining coverage is measured on the premiums incurred upon initial recognition. The Company recognizes the cash flows from the acquisition of insurance as an expense when they arise, except for commission costs, which are accrued for the duration of the insurance contract and recognized based on the passage of time.

Subsequently, the carrying amount of the liability for remaining coverage is increased by any further premiums received and decreased by the amount recognized as insurance revenue for services provided and decreases by the paid commission and increased by the amortized part of the commission. The time between providing each part of the services and the related premium due date will not exceed one year. Accordingly, as permitted by IFRS 17, the Company does not adjust the liability for remaining coverage to reflect the time value of money and the effect of financial risk.

If at any time before and during the coverage period, facts and circumstances indicate that a group of contracts is onerous, then the Company recognizes a loss in profit or loss account and increases the liability for remaining coverage to the extent that the current estimates of the fulfilment cash flows that relate to remaining coverage exceed the carrying amount of the liability for remaining coverage. In that case, the fulfilment cash flows are discounted.

The Company recognizes the liability for incurred claims of a group of contracts at the amount of the fulfilment cash flows relating to incurred claims and the future cash flows are discounted.

The Company applies the same accounting policies to measure a group of reinsurance contracts, adapted where necessary to reflect features that differ from those of insurance contracts.

v. Measurement - significant judgments and estimates

Estimates of future cash flows

In estimating future cash flows, the Company includes in an unbiased manner all reasonable and reliable data available without undue cost and effort regarding the amount, timing and uncertainty of those future cash flows at the reporting date. This information includes both internal and external historical data about claims and other experiential data, updated to reflect current expectations of future events.

The estimates of future cash flows reflect the Company's view of current conditions at the reporting date, as long as the estimates of any relevant market variables are consistent with observable market prices.

When estimating future cash flows, the Company takes into account current expectations of future events that might affect those cash flows. However, expectations of future changes in legislation that would change or annul a present obligation or create new obligations under existing contracts are not taken into account until the change in legislation is substantively enacted.

Cash flows within the contract boundary are those that relate directly to the fulfilment of the contract, including those for which the Company has discretion over the amount or timing. This includes premiums (including policyholders' premium adjustments and installment premiums and any additional cash flows resulting from these premiums), payments to (or on behalf of) the policyholder, cash flows from the acquisition of insurance and other costs incurred in performing the contract. Insurance acquisition cash flows and other costs that are incurred in fulfilling contracts comprise both direct costs and an allocation of fixed and variable overheads which can be directly attributed to the execution of the insurance contract (i.e. Attributable costs).

Cost cash flows are distributed into groups of contracts using systematic and meaningful methods that are consistently applied to all costs with similar characteristics. A significant part of direct administrative costs are directly allocated to life and non-life insurance segments. Administrative costs that cannot be directly allocated to life or non-life insurance are allocated by the Company on the basis of an analysis of the time spent of administrative employees on activities related to life and non-life insurance. The allocation of these costs within a particular segment to the associated insurance groups is carried out on the basis of a share of the annual insurance income. Further allocation of non-life insurance contracts costs to non-life insurance groups is carried out on the basis of estimates of the share in insurance income in the past period of the current accounting year. For life insurance contracts, the further allocation of costs to the insurance groups is based on the number of active policies in the accounting period. Other non-attributable expenses are not allocated to groups of insurance contracts and are reported in the financial statements separately from the technical result items, i.e. results from the insurance contract.

Discount rates

The Company sets discount rates with the so-called Bottom-up approach, creating a risk-free interest curve using market yields of government bonds as well as the market yields of other highly liquid financial instruments in the corresponding currency, with the application of credit risk correction and EIOPA methodology for extrapolation. To reflect the liquidity characteristics of insurance contracts, risk-free interest curves are further adjusted by illiquidity adjustment.

The Company measures life insurance obligations by discounting future cash flows (cash flows from the execution of life insurance group contracts) with the application of current discount rates at the appropriate measurement date.

The Company discounts cash flows of non-life insurance contracts measured in accordance with the general measurement model (loan insurance). For all other contracts, for which the premium distribution model – PAA applies, cash flows from the performance of contracts relating to claims incurred are also discounted. Applicable discount rates are determined in accordance with the methodology described earlier.

Adjustment of value for non-financial risk

Risk adjustments for non-financial risk is determined to reflect the compensation that the Company requires for bearing non-financial risk and its level of risk aversion. They are determined separately for the life and non-life contracts.

The adjustment of value for non-financial risk is determined using the following techniques:

- for measurement of the correction of values for non-financial risk in non-life insurances two methods are used: the quantum method and the cost of capital method, where the choice of the method depends on the availability of data and the stability of the results of statistical calculations of a particular portfolio; exceptionally, due to the nature of the risk, a method based on shock scenarios can also be used for liabilities for annuity claims;
- for life insurance contracts: The calculation of the value correction for non-financial risk for life insurance is based on shock scenarios with explicit margins. These margins are derived on the basis of the corresponding shocks from the life insurance risk submodules defined in Solvency II. The shocks calibrated by EIOPA in Solvency II were adjusted to the requirements of IFRS 17 and the target confidence interval.

CSM - Contractual Service Margin

The CSM of a group of contracts is recognized in profit or loss account to reflect the services provided under the group of insurance contracts in that period. This amount is determined by identifying the coverage units in the group of contracts, evenly distributing the CSM at the end of the period (before any allocation) to each coverage unit insured in the current period and expected to be insured in the future, and recognized in the profit and loss account the amount of the units allocated to the coverage units insured in that period.

The number of coverage units is the measure of quantity of services provided by a group of contracts, taking into account for each contract the quantity of benefits provided and the expected coverage period.

If there is a loss component instead of a contractual service margin, the Company allocates the following items between the loss component and the remain reserve for residual coverage:

- Expected insurance claims and administration costs in the period
- Change in risk adjustment in the period.

Allocations are made based on the ratio of the loss component and the cash flows from the fulfillment of the insurance contract, which refer to the expected future cash outflows.

vi. Presentation and disclosure

Amounts recognized in the profit or loss statement are disaggregated into:

- o an insurance service result, comprising insurance revenue and insurance service expenses; and
- o net financial income or expense from insurance contracts.

The amounts from the reinsurance contract are reported separately.

Insurance service result

For contracts that are not measured using PAA, the revenue from the insurance contract for each year represents changes in liabilities for the remaining coverage relating to the services the Company expects to receive compensation from. For contracts measured using PAA, the income from the insurance contract is recognized on the basis of the passage of time or based on the expected dynamics of service provided.

Expenses that relate directly to the fulfilment of contracts are recognized in profit or loss account as insurance service expenses, when they are incurred. Expenses that do not relate directly to the fulfilment of contracts are presented outside the insurance service result.

Investment components are not included in insurance revenue and insurance service expenses according to IFRS 17. The Company identifies the investment component of a contract by determining the amount required to repay to the policyholder in all scenarios with commercial substance. These include circumstances in which an insured event occurs or the contract matures or is terminated without an insured event occurring. The Company has established an investment component in the amount of the redemption value for all life insurance contracts with a savings component.

The Company does not disaggregate changes in the risk adjustment for non-financial risk between the insurance service result and net insurance finance income or expenses. All changes in the risk adjustment for non-financial risk recognized in profit or loss account are included in the insurance service result.

Net financial income and expenses

Changes in the carrying amounts of groups of contracts arising from the effects of the time value of money, financial risk and changes therein are generally presented as insurance finance income or expenses. They include changes in the measurement of groups of contracts caused by changes in the value of underlying items.

For most insurance and reinsurance contracts, the Company is using the option of recognizing a change in the value of liabilities and assets from insurance and reinsurance contracts based on the current discount rates in relation to the initial (so-called "locked-in") discount rate in other comprehensive income and accordingly separates net financial income or expenses from the insurance contract to the aforementioned part to be recognized in other comprehensive income and the part that is recognized through profit and loss account as release of the discount effect.

Insurance contracts that are assets and those which are liabilities, and reinsurance contracts that are assets and those which are liabilities, are presented separately in the statement of financial position as assets from insurance or reinsurance contracts and as liabilities from insurance or reinsurance contracts.

vii. Transition

In accordance with IAS 8 "Accounting Policies, Changes in Accounting estimates and Errors", IFRS 17 requires the Company to apply IFRS 17 retroactively, unless this is not practically feasible. This implies that the effective transition date is 1 January 2022, whereby adjustments to the initial balances are recognized as one-off in equity and reserves.

The Company applied the full retroactive approach for groups of contracts measured using a premiumbased approach. According to the full retrospective approach, at 1 January 2022 the Company:

- identified, recognized and measured each group of insurance contracts as if it had always applied IFRS 17;
- ceased to recognize previously recognized amounts that would not have existed if IFRS 17 had always been applied
- recognized all the resulting net effects in equity

Where retroactive application for a group of insurance contracts is impractical, the Company used two alternative transition methods - modified retroactive approach and fair value approach.

The modified retroactive approach allows certain simplifications and modifications over full retroactive application. This approach allows insurers who lack certain information to calculate initial balances as close as possible to the conditions that would be obtained by applying full retroactive approach, using information that is available, verifiable and appropriate to the insurer. The Company applies this approach to specific groups of insurance contracts relating to loan insurance against inability to repay and include contracts issued with a difference of more than one year.

Under the fair value approach, the CSM (or the loss component) as at 1 January 2022 is determined as the difference between the fair value of a group of contracts at that date and the fulfilment cash flows at that date. The Company measures the fair value of the contracts as the sum of the present value of the net cash flows expected to be generated by the contracts, determined using a discounted cash flow technique; and an additional margin, determined using a confidence level technique.

The cash flows considered in the fair value measurement are consistent with those that are within the contract boundary. For all contracts measured by fair value access, the Company used reasonable and reliable information available on 1 January 2022 to determine how to identify groups of contracts.

Some groups of contracts measured under the fair value approach contain contracts issued more than one year apart. Discount rates on initial recognition are determined at 1 January 2022 instead of at the date of initial recognition, regardless of the specific time interval length.

For all contracts measured under the fair value approach, the net amount of insurance financial income or expenses accumulated in the insurance contract financial reserve as at 1 January 2022 is determined to be zero.

The Company applied a fair value approach to life insurance contracts and for the specific groups of insurance contracts relating to loan beneficiaries' insurance against the inability to repay the loan.

• IFRS 9 Financial instruments and related annexes to various other standards (effective for annual periods beginning on or after 1 January 2023)

IFRS 9 replaced *IAS 39 Financial Instruments: Recognition and Measurement* regulates the classification, measurement and derecognition of financial assets and financial liabilities, introduces new rules for hedging accounting and a new model of impairment of financial assets and other categories in accordance with IFRS 9. IFRS 9 is effective for annual periods starting on or after 1 January 2018, with early application permitted. However, the Company has met the relevant criteria and has applied the temporary exemption from IFRS 9 for annual periods before 1 January 2023. Consequently, the Company applied IFRS 9 for the first time on 1 January 2023.

i. Financial assets - classification

Financial assets are distributed in the following categories with respect to the valuation method: valuation according to the amortised cost method, valuation at fair value through profit and loss, and valuation at fair value through other comprehensive income. The classification of financial assets depends on the business model used to manage financial assets and contracted cash flows.

A financial asset is measured at amortised cost if it meets both of the following conditions:

- o is held within a business model aimed at holding assets in order to collect contracted cash flows ("Holding for collection"); and
- o contracted cashflows relate exclusively to principal and interest payments based on the assessment of the characteristics of contractual cash flows ('SPPI test').

Financial assets are measured at fair value through other comprehensive income if they meet both of the following conditions:

o is held within a business model aimed at holding assets in order to collect contracted cash flows and sell financial assets ('Holdings for collection and sale'); and

о

contracted cashflows relate exclusively to principal and interest payments based on the assessment of the characteristics of contractual cash flows ('SPPI test').

All financial assets that are not classified as measured at amortised cost or at fair value through other comprehensive income as described above (the "Other" business model), are measured at fair value through profit and loss. Furthermore, at initial recognition, the Company may irrevocably designate financial assets, which otherwise meet the requirements to be measured at amortised cost or at fair value through other comprehensive income, measured at fair value through profit and loss if this eliminates or significantly reduces the accounting mismatch that would otherwise arise.

Also, at initial recognition of equity instruments that are not held for trading purposes, the Company may irrevocably decide to show subsequent changes in fair value through other comprehensive income. The choice is carried out on instrument-by-instrument basis.

ii. Financial assets - impairment

In accordance with IFRS 9, the impairment model required the recognition of impairment provisions based on expected credit losses (so-called 'ECL'), not just on the basis of incurred credit losses as is the case with IAS 39 and applies to financial assets classified at amortised cost and debt instruments measured in other comprehensive income.

Any change in the fair value of a debt instrument includes the effect of a change in the credit risk of the issuer of financial instrument. For all debt instruments measured at fair value through other comprehensive income, it is necessary to estimate and report value adjustment, i.e. provisions for expected credit losses. All changes in the amount of provisions for expected credit losses are recognized in the profit and loss account, while the amount of adjustments to the expected credit losses is already included in the cumulative amount of the change in fair value reported in other comprehensive income. Value adjustments are recognized through other comprehensive income, as part of the overall change in fair value, and shall not further reduce the carrying amount of financial assets measured at fair value through other comprehensive income in the statement of financial position. Changes in fair value previously recognized in other comprehensive income are recycled in full in the profit and loss after the derecognition of debt instrument.

For short-term receivables without significant financial components (real estate and business premises lease receivables, claims on employees, etc.), the Company applies a simplified approach in accordance with the requirements of IFRS 9 and assesses the correction of the value for the expected life of credit losses from the initial recognition of receivables.

Expected credit losses related to a particular instrument are estimated on the basis of expected future cash flows (based on principal, interest, fees and commissions) related to the contract, including the amounts that may arise from the realization of the relevant collateral. All expected cash flows are reduced to present value by discounting at the relevant effective interest rate.

In simplified terms, expected credit losses are calculated as the product of the probability of default ("PD "), loss given default ("LGD ") and exposure at default ("EaD"). Default status is considered to have occurred when one or both circumstances have occurred: the improbability of payment by the debtor, when the Company considers that the payment of existing loan obligations in full by the debtor is unlikely to be without the realization of collateral and when there has been a materially significant delay in payment, i.e. the debtor is late with the payment of due obligations towards the Company for more than 90 days.

Probability-weighted scenarios- expected credit losses are modeled by several forward-looking scenarios, which take into account the probability of occurrence of "stressful" and favorable economic conditions, so that the resulting value of the ECL represents a probable-weighted number based on the results of several analyzed economic scenarios within which credit risk parameters are modeled. The appropriate selection of a set of representative economic scenarios based on the impartial and objective information available to the Company, as well as the probability of a particular (representative) economic scenario, is determined by the relevant organizational units of the Company by the expert method.

Expected credit losses for a twelve month period relate to part of the expected credit losses over the entire duration of the instrument that represent the expected credit losses as a result of default over a period of twelve months from the reporting period. Lifetime expected credit losses refer to the expected credit losses over the entire life of the instrument that represent the expected credit losses as a result of the occurrence of all possible default statuses during the life of the financial instrument. For financial instruments to which this impairment model applies, the Company always recognizes, on initial recognition, in profit and loss account, at least the amount of expected credit losses for the twelve month period. The expected credit losses over the life of a financial instrument are recognized if there is a significant increase in credit risk compared to initial recognition or the instrument is credit impaired. For financial assets that are credit impaired at initial recognition (POCI assets), estimated expected credit losses are included in the initial fair value of the asset and the Company determines a credit adjusted effective interest rate for it. For POCI assets, the Company recognizes only a cumulative change in the expected credit losses over the entire life of the financial asset in the reporting period compared to initial recognition. If there is a positive change in the expected credit losses compared to the initially determined the expected credit losses, the change is carried out through the adjustment of the gross book value of the asset, while with negative changes in the expected credit losses compared to the initially determined expected credit losses, impairment reservations are formed.

iii. Financial liabilities

IFRS 9 largely retains the requirements of IAS 39 for the classification and measurement of financial liabilities.

Financial liabilities are initially recognised at fair value reduced for transaction costs and are subsequently valued at amortised cost using the effective interest rate method, except for the following:

- o financial liabilities determined at fair value through profit and loss. Such liabilities, including derivative instruments that are liabilities, are subsequently measured at fair value;
- o financial liabilities arising if the transfer of financial assets does not meet condition for derecognition or if a follow-up approach is applied. The assets transferred and the related liability are measured on a basis that reflects the rights and obligations retained by the entity. The related liability is measured in such a way that the net carrying amount of the transferred assets and the related liability is equal to the following: the amortised cost of rights and liabilities retained if the transferred assets are measured at amortised cost, or the fair value of the rights and liabilities retained when measured on a stand-alone basis if the transferred assets are measured at fair value.

- o financial guarantee agreement. After initial recognition, such contract is subsequently measured at more than the following two amounts: the amount of provision for expected credit losses and initially recognised amount at fair value;
- o the obligation to provide a loan at interest rates lower than market interest rates. Such an obligation shall subsequently be measured at more than the following two amounts: the amount of provision for expected credit losses and initially recognised amount at fair value;
- o unpredicted amounts recognised by the customer in the context of the business merger to which IFRS 3 applies. Such unpredicted amounts are subsequently measured at fair value, and changes are recognised in the profit and loss account.

The adoption of IFRS 9 did not have an effect on financial liabilities.

iv. Transition

For the purposes of the first application of IFRS 9, the Company decided on a simplified method based on which it will not change comparative data and will recognize adjustments to the carrying amount of financial assets in initial retained earnings from the date of the first application of the standard, i.e. from 1 January 2023.

The following tables present the reconciliation of the present values of each category of financial assets previously measured in accordance with IAS 39 and the new amounts determined according to IFRS 9 for the Company. Also, below are explanations related to the reclassification of financial assets listed in the tables below:

a) Equity financial instruments (shares) that were previously classified at fair value through the profit and loss according to IAS 39 and are part of the portfolio related to asset and liability management activities, are reclassified into the category of fair value through other comprehensive income according to IFRS 9, i.e. the option of valuation through other comprehensive income was chosen for them since they are not held for trading.

b) Debt financial instruments (bonds) that were previously classified at amortised cost or as available for sale (fair value through other comprehensive income) according to IAS 39, are reclassified into the category of fair value through the profit and loss according to IFRS 9 due to the business model of holding assets for the purpose of sale.

c) Equity financial instruments (investment funds) are reclassified from the category of assets available for sale (fair value through other comprehensive income) according to IAS 39 to the category of assets that are mandatorily fair value through the profit and loss according to IFRS 9 since they refer to financial assets whose cash flows do not contain only principal and interest.

The items of financial assets and liabilities and the related items of the statement of comprehensive income for the comparative period of 2022 are presented applying IAS 39.

Related party transactions

There were no unusual related party transactions of goods and services in the current reporting period.

Seasonality of business activities

Company's operations are not seasonal.

Segment reporting

The Company's reporting segments comprise the life insurance segment and the non-life insurance segment. The description of segments as well as allocation of costs between segment of life insurance and non-life insurance, capital and reserves and assets described in the annual financial statements for 2022, have not changed. There were no significant intersegmental revenues and expenses in the period observed.

Fair value

Fair value is the amount that should be received for an asset sold or paid to settle a liability in an arm's length transaction between market participants at the value measurement date. Fair value is based on quoted market prices, where available. If market prices are not available, fair value is estimated by using discounted cash flow models or other appropriate pricing techniques. Changes in assumptions on which the estimates are based, including discount rates and estimated future cash flows, significantly affect the estimates. Therefore, at this point the estimated fair value cannot be certainly achieved from the sale of a financial instrument. The fair value of investments at amortised cost is presented below:

	30 September 2023			31 December 2022			
	Net book value	Fair value	Difference	Net book value	Fair value	Difference	
	in EUR	in EUR	in EUR	in EUR	in EUR	in EUR

Methods of assessment or assumptions in determining fair value

For measuring the fair value, the Company takes into account the IFRS fair value hierarchy rules that reflect the significance of inputs used in the assessment process. Each instrument is assessed individually and in detail. The levels of the fair value hierarchy are determined on the basis of the lowest level and the input data that are important for determining the fair value of the instrument.

The table below analyses financial instruments carried at fair value using the valuation method. Different levels have been defined as follows:

- Quoted prices (unadjusted) in active markets for identical assets or liabilities (Level 1),
- Inputs other than quoted prices included within Level 1 that are observable for the asset or liability, either directly (that is, as prices or interest rates information) or indirectly (that is, derived from prices or interest rates) (Level 2),
- Inputs for the asset or liability that are not based on observable market data (unobservable inputs) (Level 3).

The Company's assets measured at fair value as at 30 September 2023 are presented as follows:

	Level 1	Level 2	Level 3	Total
	in EUR	in EUR	in EUR	in EUR

Total assets at fair value	487,105,111	181,334,471	104,557,456	772,997,038

The Company has adopted IFRS 13, pursuant to which it is required to disclose the fair value hierarchy of financial assets that are not measured at fair value as well as a description of valuation techniques and inputs used.

Financial liabilities, which are not valued at fair value through profit and loss account, are recorded at amortised cost. The Management Board believes that, due to fact that interest rate of these instruments is in line with market rates, the carrying value of these instruments is not significantly different from their fair value.

The fair value of deposits, loans and financial liabilities are estimated on the basis of inputs that are not commercially available rates, and are therefore classified as Level 3, or by using publicly available rates published by the Croatian national bank (for the Company's loans) and would therefore be classified as Level 2 in the fair value hierarchy. Investments with available market prices that are classified in the portfolio of held-to-maturity investments are classified as Level 1.

The fair values of cash and cash equivalents and other receivables, i.e. other assets do not differ significantly from their carrying amounts due to the short-term nature of these financial instruments. Fair value is determined based on Level 2 inputs for cash and cash equivalents and based on Level 3 inputs for other receivables i.e. other assets.

The fair value of financial instruments that are not traded in an active market is determined by using valuation techniques. These valuation techniques maximise the use of observable market data where it is available and rely as little as possible on entity-specific estimates. If all significant inputs required to fair value an instrument are observable, the instrument is included in Level 2. The fair value of financial instruments that are classified as Level 3 is determined by using discontinued cash flow techniques or other valuation techniques by using relevant observable market data, information about current business and estimation of issuer's future business of the financial asset in question. There was no significant increase or decrease in the value of the parameters that would affect the change in the fair value of financial assets classified in Level 3 fair value.

In the reporting period, the Company has reclassified one equity security from Level 2 to Level 3 in the amount of EUR 19.1m.

The fair value of investment property is derived primarily by applying a sales comparison and income approach, and sometimes lacking information on market parameters by applying the cost method, depending on a particular property.

The fair value of the property for own use was carried out primarily by applying the income method,

The most significant inputs in the valuations were prices or rental income per square meter, generated based on comparable properties in the immediate vicinity and then adjusted by differences in key characteristics.

Information on measurements of the fair value of investment property using significant inputs that are not available on the market (Level 3) is published in the financial statements for 2022.

Intangible assets

In the period observed, intangible assets increased by EUR 326 thousand, and this represents the net effect of increasing intangible assets due to additional investments in the observed period and reduction of intangible assets due to amortization. The Company capitalized the costs of net salaries in the amount of EUR 248.4 thousand, the costs of contributions from salaries in the amount of EUR 72 thousand, the costs of taxes and surcharges from salaries in the amount of EUR 55.1 thousand, the costs of contributions to salaries in in the amount of EUR 56.6 thousand and other employee costs in the amount of EUR 24 thousand.

Share capital and shares

The Company's share capital with a nominal value of EUR 79,843 thousand as at 30 September 2023, calculated using a fixed conversion rate, is divided among 429,697 shares with a nominal value of EUR 185,81. The shares are marked as follows:

Number of shares	Nominal amount (in 000 EUR):
307,598 ordinary shares I, emission with ticker CROS-R-A/CROS	57,155
113,349 ordinary shares II, emission with ticker CROS-R-A/CROS	21,062
TOTAL OF ORDINARY SHARES	78,217
8,750 preference shares I, emission with ticker CROS-P-A/CROS2	1,626
TOTAL OF PREFERENCE SHARES	1,626
TOTAL OF ORDINARY AND PREFERENCE SHARES	79,843

Each share, ordinary and preference, provides the right to 1 (one) vote at the Company's General Assembly. Due to the guaranteed dividend payment, preference shares are classified as financial liabilities. All shares are paid in full, issued in dematerialized form, are transferable and are managed at the central depository of the Central Depository & Clearing Company.

Based on the provisions of the Act on the introduction of the euro as the official currency in the Republic of Croatia and the provisions of the Companies Act, the Company proposed at the General assembly a decision on the adjustment of the share capital and the nominal amount of the Company's shares in such a way as to increase the amount of the nominal value of the share from 185.81 EUR, calculated by conversion into euros using a fixed conversion rate with rounding to the nearest cent, to the amount of EUR 186.00. The aforementioned increase in the nominal amount of the share is carried out in order to round the nominal amount of the shares to a whole number, as prescribed by Article 163, paragraph 4 of the Companies Act.

With the purpose of aligning the share capital with the provisions of the Companies Act, the share capital is increased by the amount of EUR 80,812.35, whereby the total share capital of the Company after recalculation and adjustment amounts to EUR 79,923,642.00. This adjustment was made on 5 October 2023 after changes in the court register.
